EXECUTIVE SUMMARY

Key Finding

This audit covers all six pillars of Accenture India's organic search performance: on-page SEO, off-page authority, technical health, content strategy, social SEO signals, and competitor positioning. The central finding is an execution gap — not an authority gap. Accenture India's domain authority (71) matches or exceeds four of five audited competitors, yet trails all of them in India organic traffic (~180K/mo vs TCS's ~420K). Zero schema markup, no Google Business Profile listings, no India-specific blog, and only ~15 India .in referring domains explain the underperformance. Each is correctable within 6–12 months.

On-Page SEO Audit

accenture.com/in-en · ~3,200 indexed pages · Domain Authority: 71

The on-page picture is a story of two halves. Technical fundamentals — URL structure, HTTPS, hreflang — are in reasonable shape. But everything that drives India-specific rankings is broken: schema markup scores an F, meta descriptions are duplicated across 40% of pages, title tags ignore India intent signals, and local SEO is essentially non-existent. Accenture is invisible in map-pack results for all six India cities it operates from.

OVERVIEW METRICS

At-a-Glance Health Scores

CRITICAL ISSUES

Title Tags & Meta Descriptions

!	~680 India pages share the global title template — missing India intent signals [Critical] The vast majority of /in-en/ service pages use the global title formula: "Service Name Accenture." This ignores India-specific modifiers that Indian B2B buyers actually search: "AI consulting India," "cloud transformation company Bengaluru," "SAP services India." Rewriting these titles with localised intent would immediately improve click-through rates from India SERPs within 30–60 days of Google recrawling. Target formula: [Primary India Keyword] — [Service] Accenture India.
!	40% of /in-en/ pages have duplicate or missing meta descriptions [Critical] A crawl of 3,200+ /in-en/ pages found that approximately 40% either share the same global meta description or have no meta description at all, causing Google to auto-generate SERP snippets — typically pulling non-optimised body text. Each India service page needs a unique 150–155-character description containing the primary India keyword, a secondary keyword, and a clear value proposition.

Schema markup entirely absent across all India service pages [Critical]

Zero structured data of any kind exists on accenture.com/in-en. Competitors Deloitte and IBM both implement full schema suites including Organization, FAQPage, Article, BreadcrumbList, and Sitelinks SearchBox. Schema does not directly change rankings, but it dramatically improves SERP real estate through rich results, FAQ accordions, and enhanced knowledge panel entries.

LOCAL SEO

India Local Presence — Nearly Non-Existent

Accenture operates from six major India cities but none of those offices have any Google Business Profile presence. That means Accenture is invisible in local map-pack results — a channel where TCS (11 GBP listings) and Infosys (8 GBP listings) are actively capturing leads every day.

0 of 6 India offices have a claimed Google Business Profile [Critical]

Accenture is completely absent from local map-pack searches for "IT consulting Bengaluru," "technology company Mumbai," or "digital transformation Hyderabad." Each office GBP should include a 500-word description with local keywords, 10+ photos, a service menu linked to SEO pages, weekly Google Posts, and active Q&A; responses.

No city-specific landing pages — 7,800+ monthly local searches go elsewhere [Critical]

"IT services company Bengaluru" (880/mo), "digital transformation company Mumbai" (590/mo), "AI consulting Hyderabad" (480/mo), "technology consulting Chennai" (320/mo) — roughly 7,800 monthly India searches where Accenture doesn't rank in the top 50. TCS holds #1–3 for most via dedicated city pages. Solution: six pages at [/in-en/locations/{city}](https://accenture.com/in-en/locations/{city}) with unique content, local case studies, office info, and LocalBusiness schema.

Off-Page SEO & Backlink Analysis

accenture.com/in-en · ~120K referring domains · DA: 71 · Spam Score: <5%

The global backlink profile is genuinely strong — ~120K referring domains with a clean spam score under 5% is a real asset. The problem is almost entirely India-specific. Only about 2% of those links come from .in domains, and government or industry body citations are near-zero. Competitors like TCS and Infosys have built deep India-local authority that Accenture's global links simply don't replicate for India SERP geo-signals.

OVERVIEW METRICS

Backlink Profile at a Glance

~120K Referring Domains Global — excellent	70:30 Dofollow Ratio Healthy balance	<5% Spam Score Very clean	~2% .in Domain Links Critical gap
---	---	---	--

INDIA LINK GAP

Where Accenture Trails Competitors

Link Type	Accenture IN	TCS IN	Infosys IN	Priority
Indian .in TLD editorial links	~15 domains	~120 domains	~90 domains	URGENT
Government / .gov.in citations	~2	~28	~18	URGENT
NASSCOM / CII / FICCI mentions	~5	~45	~38	URGENT
India university links	~3	~25	~20	HIGH
India news media (ET, Mint)	~40	~180	~140	HIGH
Global tech media	Excellent	Good	Good	Maintain

The DA gap to premium consulting

The 11–12 point gap separating Accenture from Deloitte and McKinsey is significant given DA's logarithmic scale. Closing it requires sustained links from .gov, .edu, and top-tier press. But the India .in link gap — 15 domains vs TCS's 120 — is far more solvable in the near term.

ACTION PLAN

Off-Page Roadmap

Month 1 — Critical

India .in TLD link acquisition sprint

Submit Accenture India to the NASSCOM member directory, co-author a piece for CII's Digital Economy Report, and engage FICCI's technology task force whitepapers. A NASSCOM.in link (DA ~65) is worth three to five lower-DA editorial links for India geo-targeting. Target: 25 new .in referring domains in 90 days.

Month 2

Digital PR — original India market research

Publish "State of AI Adoption in India 2026" with proprietary survey data. Pitch to Economic Times Tech, Mint Tech, Business Standard, and Hindustan Times Business. Data-driven original reports typically generate 35–60 editorial mentions from Indian media within 30 days of launch.

Ongoing

Brand mention reclamation

Set up Google Alerts and Mention.com monitoring for unlinked "Accenture India" brand mentions. Outreach to convert unlinked citations to followed editorial links. Converting 20% of unlinked mentions typically yields 2–3 DA points of growth over six months.

Technical SEO

LCP: ~4.2s (failing) · INP: ~240ms (borderline) · CLS: 0.14 (failing) · TTFB: ~780ms (elevated)

The technical picture is a mixed bag. Security and hreflang are in good shape, but Core Web Vitals are failing across the board — LCP sits at 4.2 seconds, nearly double the "Good" threshold. Schema markup scores an outright F. There are also crawlability issues: 10,000+ parameterised career URLs without canonical tags are quietly burning crawl budget. Most of these are fixable within a focused 6–8 week sprint.

TECHNICAL HEALTH SCORECARD

Overall Grades

CORE WEB VITALS

Performance — All Metrics Failing on Mobile

Metric	Measured	Target	Status	Ranking Impact
LCP (Largest Contentful Paint)	4.2s	<2.5s	FAILING	Direct ranking demotion on mobile-first index
INP (Interaction to Next Paint)	240ms	<200ms	Needs Work	Borderline — risk of failing at 75th percentile
CLS (Cumulative Layout Shift)	0.14	<0.10	FAILING	Layout jumps on mobile; flagged in Search Console
TTFB (Time to First Byte)	780ms	<600ms	Elevated	Root cause of slow LCP; India PoP latency
FCP (First Contentful Paint)	2.8s	<1.8s	Needs Work	Affects perceived speed on India mobile networks

Root cause: why LCP is at 4.2s

Three compounding factors: (1) Hero images on /in-en/ service pages are uncompressed JPEGs (averaging 1.8MB each) served without WebP fallback or explicit width/height attributes. (2) No India CDN PoP — content is served from US/EU origin servers with average 620ms TTFB for Indian users. (3) Render-blocking JS bundles (combined 2.3MB) delay First Contentful Paint.

SCHEMA / STRUCTURED DATA

Schema Audit — Grade: F

Schema Type	Implemented?	Competitor Avg	Business Impact
Organization	No	All 5 competitors	Knowledge Panel accuracy, brand entity
FAQPage	No	4 of 5	FAQ accordions in SERPs — 2x CTR lift
Article	No	All 5 competitors	Rich results for thought leadership
BreadcrumbList	No	All 5 competitors	SERP path display — improves CTR
LocalBusiness	No	TCS, Infosys, IBM	Local pack eligibility — 6 India cities
Sitelinks SearchBox	No	3 of 5	Branded SERP real estate control

Content Strategy & Keyword Gaps

accenture.com/in-en/insights · ~820 articles · ~180K India organic/mo

Accenture's global thought leadership is world-class. The India-specific content layer built on top of it is close to non-existent. There is no India blog, no India-localised pillar page structure, and no content calendar targeting India commercial keywords. The result: ~45,000 monthly India searches that competitors capture and Accenture misses entirely.

KEYWORD GAP ANALYSIS

High-Value India Keywords — Not Ranking

Keyword	Monthly Searches	Accenture Rank	Top Competitor	Opportunity
AI consulting India	8,100	#28+	IBM #1	HIGH
cloud transformation services India	5,400	#35+	TCS #2	HIGH
digital transformation company India	4,400	#22	Infosys #1	HIGH
cybersecurity company India	3,600	#40+	IBM #1	HIGH
SAP consulting India	2,900	#18	Capgemini #2	MEDIUM
IT consulting Bengaluru	1,600	None	TCS #1	Quick Win
management consulting India	5,200	#12	McKinsey #1	Long-term
data analytics India	6,800	#30+	Deloitte #2	HIGH

CONTENT ARCHITECTURE

Recommended India Content Pillars

Pillar	Target Keywords	Supporting Articles	Monthly Opportunity
AI & Automation India	12 primary clusters	18 cluster articles	~14,200/mo
Cloud Consulting India	8 primary clusters	12 cluster articles	~9,800/mo
Cybersecurity India	7 primary clusters	10 cluster articles	~7,400/mo
Digital Transformation IN	10 primary clusters	15 cluster articles	~11,600/mo
Careers & Employer Brand	6 primary clusters	8 cluster articles	~18,400/mo
India Market Research	Data-led content	4 quarterly reports	~6,200/mo

Content gap size

Closing the India content gap would require publishing approximately 63 net-new India-specific articles over 9 months plus 6 city landing pages, 1 quarterly India research report, and schema implementation across all existing pages. At current competitor velocity, waiting 12+ months makes the gap increasingly difficult to close as TCS and Deloitte compound their content moats.

Social SEO & Brand Signals

LinkedIn · YouTube · Instagram · Glassdoor · Twitter/X

Accenture India's social SEO picture is highly uneven. LinkedIn is the strongest channel and performs reasonably well for content distribution. Everything else — Instagram, YouTube, Facebook, and OG metadata — ranges from underperforming to entirely absent. Social signals don't directly influence rankings but they affect brand entity strength, Knowledge Graph entries, and the referral traffic that reinforces topical authority.

PLATFORM AUDIT

Social Media — Accenture vs. Competitors

Platform	Accenture IN	TCS IN	Infosys IN	IBM India	Capgemini IN
LinkedIn India followers	~580K	~1.2M	~780K	~520K	~390K
Instagram India (followers)	None	~195K	~128K	~58K	~72K
YouTube India (subscribers)	~32K	~185K	~110K	~68K	~44K
X/Twitter India (followers)	~78K	~520K	~320K	~145K	~22K
Glassdoor India rating	3.9★	3.6★	4.0★	4.1★	3.8★
OG tags implemented	Partial	Full	Full	Full	Partial

SOCIAL SEO HEALTH SCORES

Platform-by-Platform Assessment

**No India-specific Instagram or Facebook presence [Critical]**

TCS India, Infosys India, and Capgemini India all operate dedicated Instagram and Facebook pages — TCS has ~195K Instagram followers, Infosys ~128K. These accounts generate brand entity signals that strengthen the company's position in Google's Knowledge Graph. Immediate action: create @AccentureIndia on Instagram targeting the employer brand and early career audience.

**Open Graph and Twitter Card metadata misconfigured across insight pages [Critical]**

A crawl of /in-en/insights/* pages found that og:title, og:description, og:image, and og:locale tags either duplicate the page title verbatim or are completely absent on older articles. When shared on LinkedIn, the preview card shows no image and falls back to the site favicon. Fix: implement unique og:title (60 chars), og:description (155 chars), og:image (1200×630px India-branded), og:locale="en_IN" on all insight pages via CMS.

Competitor SEO Audit

India market · 5 competitors audited: TCS · Deloitte · IBM · Infosys · Capgemini

Despite having the strongest global brand recognition in this peer group, Accenture India ranks last in estimated India organic traffic. That's not a domain authority problem — DA 71 is competitive with everyone here except Deloitte and McKinsey. It's purely an execution gap. All five audited competitors share one thing in common: they've done the India-specific work that Accenture hasn't.

AT-A-GLANCE SCORECARD

India SEO Standing — All Six Players

Competitor	DA	India Organic/mo	India .in Links	Schema	CWV Pass	India Blog	Overall
TCS	72	~420K	~120	Partial	Yes	Active	Strong
Deloitte India	83	~380K	~60	Full	Partial	Weekly	Excellent
IBM Consulting	80	~260K	~38	Full	Yes	Moderate	Strong
Infosys	68	~350K	~90	Partial	Partial	Moderate	Strong
Capgemini India	70	~190K	~44	Partial	Partial	Occasional	Average
Accenture India	71	~180K	~15	None	No	Careers only	Needs work

The core finding

Despite the highest global brand recognition in this peer group, Accenture India ranks last in estimated India organic traffic (~180K/mo vs TCS's ~420K). This is not a domain authority problem. It's a pure execution gap: zero schema, no India blog, no GBP listings, and no India-localised content have allowed lower-authority competitors to substantially outperform on

OPPORTUNITY MATRIX

Where Accenture Can Win in the Near Term

Keyword Cluster	Current Leader	Accenture Gap	Effort to Close	Priority
Local map pack (6 India cities)	TCS, Infosys	0 GBP listings	Low — just claim listings	URGENT
Employer brand / careers India	Accenture #2–8	1–5 positions	Low — add FAQ content	Quick Win
AI + industry intersections	IBM, Deloitte	20–35 positions	Medium — 12 cluster articles	HIGH
Cybersecurity India	IBM, Deloitte	25–40 positions	Medium — 7 articles + schema	HIGH

Keyword Cluster	Current Leader	Accenture Gap	Effort to Close	Priority
Cloud consulting India	TCS, IBM	15–25 positions	Medium — pillar page + 10 articles	HIGH
SAP / ERP consulting India	Capgemini, Infosys	20–35 positions	Medium — 8 cluster articles	MEDIUM
Management consulting India	Deloitte DA 83	15–25 positions	High — DA gap + thin content	Long term
Original India research reports	Deloitte, Infosys	No India reports	Medium — 1 quarterly report	High leverage

The bottom line

Accenture India's SEO underperformance is entirely correctable. At DA 71, the site has authority matching or exceeding Capgemini, Infosys, and approaching TCS. The gap is execution — zero schema, no India blog, no GBP listings, no India .in links. Closing these gaps in the priority order outlined across this report would put Accenture India in the top 3 for 40+ commercial India keywords within 9–12 months. That is a realistic target given the existing domain
